### DETAILED ACTION

1. Regarding the preliminary amendment "A", filed 5-11-01, Claims 22,23,25 and 27 (i.e., claims 22-27) could not actually be entered or amended because the application was filed with Claims 1-21, and because they were labeled as "(amended)". However, since this is a formal matter, these claims will be acted upon as to their merits.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-8,15-19,22 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Tang et al (4588994).

Regarding Claims 1-8,15,16,22 and 23 Tang et al show a device 80 for controlling the direction of a radiation beam, the device comprises, a transmission means 12,30 for transmitting the beam from the source 84,89, and a steering means 46,48,88,etc., for steering the beam, the transmission means comprises a body of magnetic material 12 having a central axis forming an aperture therethrough for passing the beam and parallel to the radiation beam, where the steering means causes the radiation beam to emerge from the transmission means offset relative to the central axis in free space in a known direction (Fig. 6, 90,92), all arranged as claimed. The magnetic means applies a

gradient in magnetism across the aperture and it is not perpendicular to the central axis (Fig. 6). The frequency bands claimed are taught by Tang et al.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 13,14,20,21,25 and 27 rejected under 35 U.S.C. 103(a) as being unpatentable over Tang et al in view of Robertson et al (WO 97/29525, of record).

A conical reflector 8 is shown by Robertson et al in a scanned and polarized antenna system in Fig. 2 to be well known in the antenna art. It would have been obvious to employ such a reflector in the system of Tang et al to prevent scattering. Regarding Claims 20,21,25 and 27, a communications unit including RX/TX, modulator/demodulator is an obvious use for the system disclosed in the primary reference device and notice of such use is hereby taken in order to provide modulation/information transmission and reception.

***Allowable Subject Matter***

6. Claims 9-12 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims.
